and a lower layer of thermoplastic synthetic fibers which is more hydrophilic than said upper layer but less hydrophilic than said core;

said upper and lower layers being intermittently bonded together by thermally embossing said side zones; and

said central zone being thicker than said side zones.

- A sanitary napkin according to Claim wherein said lower layer is coextensive with substantially an entire surface of said upper layer.
- A sanitary napkin according to Claim 6 wherein portions of said top layer and said back layer extending outward beyond a peripheral edge of said core are bonded together by a seal line.
- 9. A sanitary mapkin according to Claim 6 wherein said core comprises a molded fluff pulp having a uniform thickness.
- A sanitary napkin according to Claim 6 wherein said thermoplastic synthetic resinous material is a fibrous nonwoven fabric.
- 5 M. A sanitary napkin according to Claim 6 wherein said thermoplastic synthetic resinous material is a perforated film.
 - 4. A sanitary napkin comprising:
 - a liquid permeable top layer;
 - a liquid impermeable back layer:
 - a liquid absorbent core disposed between said top layer and said back layer;

said top layer having a central zone and side zones at both sides of said central zone, said top layer including an upper layer of a thermoplastic synthetic resinous material and a lower layer of thermoplastic synthetic fibers;

said upper and lower layers being intermittently bonded together by thermally embossing said side zones; and

said central zone being thicker than said side zones.
